

# INTRODUCING SuperParking®

SuperParking® is our bespoke solution for large car parks. It's designed and engineered to provide a tough, hard-wearing, low maintenance surface perfect for supermarket, retail, transport, office and leisure centre facilities.

## WHY SUPERPARKING®?

### LONG-LASTING

SuperParking® greatly reduces the risk of indentation from static loading such as parked cars, keeping the pavement free of health and safety problems. It also stops water from sitting in specific areas leading to premature breakdown of the pavement.

### LOW MAINTENANCE

The damaging effects of the environment, in particular water on asphalt mixtures, reduces life expectancy. SuperParking® surpasses the durability of standard mixes, reducing both running and maintenance costs.

### SCUFF RESISTANT

Through the use of high performance bitumen, SuperParking® is able to provide resistance to tyre scuffing and erosion up to four times better than standard asphalt mixtures. Greatly reducing the potential for damage from the aggressive nature of parking vehicles - where initial damage can lead to total failure.

### ECO-FRIENDLY

Create sustainable projects – all mixes can be supplied as SuperLow warm mix asphalt.

### COST EFFECTIVE

SuperParking® can be laid thinner than conventional materials offering contractors and clients financial benefit.
